Problem Statement #06: Alumni Mentorship & Mock Interview Platform

Name: Tanusha prakash

SRN: PES1UG24CS494

Section: I

REQUIREMENTS TABLE

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall recommend alumni mentors to student mentees based on the student's selected domain and facilitate session booking with a suitable mentor.	High	Pass: The system displays mentors whose domains match the student's selected domain and allows an available session to be booked. Fail: An unrelated mentor is recommended or an already-booked mentor slot can be selected.	Domain-based mentor matching is the primary function of the platform.
FR-002	Functional	The system shall allow alumni mentors to define and update their available mentorship and mock-interview time slots.	High	Pass: A mentor can add, modify, or remove an available time slot and the updated availability is shown to students. Fail: An unavailable or deleted slot remains bookable.	Accurate mentor availability is required to prevent scheduling conflicts.
FR-003	Functional	The system shall allow a student mentee to book an available mentorship or mock-interview session with an alumni mentor.	High	Pass: After the student selects an available slot, the session is confirmed and stored in the system. Fail: Two students are able to book the same mentor time slot.	Session booking enables students and mentors to conduct mentorship interactions.

FR-004	Functional	The system shall generate a meeting link and provide the confirmed session details to both the student mentee and alumni mentor after successful booking.	High	Pass: A successful booking displays the confirmed date, time, mentor, student, and meeting link to both participants. Fail: A confirmed session is created without the required meeting details.	Both participants require complete session information to attend the scheduled meeting.
FR-005	Functional	The system shall allow an alumni mentor to submit a structured scorecard and feedback after completing a mock-interview session.	Medium	Pass: After a completed mock interview, the mentor can submit the required scores and feedback and the student can view the submitted scorecard. Fail: An incomplete scorecard is accepted when mandatory fields are empty.	Structured feedback helps students identify their strengths and areas for improvement.
NFR-001	Nonfunctional – Security and Privacy	The system shall protect user profile data and feedback scorecards according to privacy guidelines and shall support soft deletion of requested data within 24 hours.	High	Pass: A deletion request marks the requested profile or scorecard data as soft-deleted within 24 hours and it is no longer visible through normal system access. Fail: The requested data remains normally accessible after 24 hours.	Student profiles and interview feedback contain personal information that must be protected.
NFR-002	Nonfunctional – Performance	The system shall display mentor recommendations and available session slots within 3 seconds of a valid student request.	Medium	Pass: Performance testing shows that mentor recommendations and available slots are displayed within 3 seconds under normal system load. Fail: The response time exceeds 3 seconds.	Fast response time provides a smooth and responsive booking experience for students.
